👤 ABOUT ME

Computer Engineering master's student with a strong interest in Systems Engineering and AI-driven engineering solutions. Currently developing an AI assistant for automated SysML v2 model generation, combining MBSE principles with Large Language Models. Keen to further develop expertise in prompt engineering, structured model specification, and data-driven problem solving in both research and industry environments. Passionate about building intelligent tools that enhance engineering efficiency and decision-making.

📁 PROJECTS

Agent SE, Fraunhofer IEM Paderborn, Germany

04/2025 - Present

Project Context - Developing a domain-specific AI assistant for automated generation of SysML v2 textual models.

Role- Project Manager

- Designed structured prompt architectures for sequence, analysis, and requirements modeling; contributed to state machine, activity modeling modules & context aware cross modelling.
- Implemented a JSON-based specification concept (POC) for structured SysML v2 code generation.
- Developed Model Context Protocol (MCP) tools for analysis cases, views, and viewpoints also worked on inline chat feature.

Engineering Assistant for CAD models

11/2024 - 01/2025

Course - Data Driven Engineering

Primarily focused on prompt engineering to ensure the LLM correctly translated user requirements into structured geometry

Weather Monitoring Dashboard, Node-Red | IOT

05/2021 - 06/2021

- Designed and implemented a weather monitoring system through open source to collect environmental data such as temperature, humidity, and air pressure.
- Developed Node-RED flows to process sensor data, perform data aggregation and analysis, and visualize insights on a web-based dashboard which reflected on a CSV file as well.

👛 WORK EXPERIENCE

Associate Cloud Innovation and Engineering, Price Waterhouse Coopers(PWC)

08/2022 - 06/2023

Fraud Analysis and Detection, Quality Reviewer

- Monitored and Analyzed historical data and patterns such that businesses can proactively implement measures to mitigate these risks and prevent financial losses.
- Implemented robust fraud detection processes, such that it minimized the impact of fraudulent transactions, insurance claims, or identity theft on their bottom line.
- Increased the efficiency by 15% and optimized the businesses to strengthen their security measures and prevented future fraudulent attempts.
- Orchestrated a dedicated workflow by checking on through ECAMS, Safire, BO to identify fraud and prevented against financial loss.

Software Developer Intern, Price Waterhouse Coopers (PWC)

03/2022 – 08/2022

Bengaluru, India

- Created and managed detailed test cases in **JIRA**, prioritizing them based on severity and impact to ensure efficient defect resolution.
- Contributed to improving product quality by maintaining structured test documentation and traceability.

Software Developer Intern, Cozentus Technology Pvt. Ltd.

08/2021 – 12/2021

Odisha, India

Python Developer

Project Context- Developed solutions that will improve port operations efficiency by accurately predicting the estimated time of arrival (ETA) of sea-going vessel.

- Created a trained data sample that generates reports based on origin and destination showing the time duration for the travel.
- Interpreted open source libraries like numpy, pandas, fuzzywuzzy, spacy to process large volume of text and noise across the data and optimized timestamp which increased the efficiency.
- Developed a Python script to convert PDF documents to XML format, automating the extraction and transformation process. Implemented functionality to display characteristic information about the extracted text

EDUCATION

Masters in Computer Engineering

Paderborn University

10/2024 – Present

Germany

Bachelor Of Technology in Electronics and Communication Engineering,

Silicon Institute of Technology, BBSR

CGPA-8.38 (German Equivalent - 2.2)

08/2018 – 06/2022

Odisha, India

TECHNICAL SKILLS

Programming Languages – Python, SQL, Java

Known Frameworks & Libraries – Numpy, Pandas, OpenAI API (LLM Integration), Git

Methodology & Concepts – Agile methodology, Prompt Engineering, Model Context Protocol (MCP)

CERTIFICATIONS

Agile & Beyond, Software Innovation Campus(SICP), Paderborn

06/2025

Goethe A1 Certification

08/2024

Agile Methodology Certification

09/2023

LEADERSHIP

- As **project Manager** for particular use case of Agent-SE managed end-to-end project execution, including task allocation, documentation oversight, and feature improvements, successfully delivering project objectives through effective coordination.
- As the Vice President of '**Indische Studierenden Gesellschaft**' my responsibility ranges from organizing social events to managing support for the students within the University
- Conducted team hurdles and being a QR coached my team as well for the delivery of better quality while in PWC.
- Selected by professor in University to present motivational speech for Juniors in their career growth.

LANGUAGES

English – Fluent
